

**Keeler Dunes Dust Mitigation Project  
SPECIFICATION NO. 14-03**

**Addendum 2**

Date: May 15, 2014

Modifications to Licensing Requirements:

The Prime Contractor does not need to have a Class A or a C-27 license. The subcontractors performing any element of the work must have the appropriate license for conducting that work, and a responsible supervisor from that licensed firm must be on site at all times while the work is being conducted. For the irrigation system development, landscaping, and irrigation tasks, a C-27 license is sufficient. For the directional drilling, the license required by CalTrans must be possessed by the entity conducting the drilling.

The prime contractor must post the required bonds, and will be the responsible entity for reporting to the District, and will ensure compliance with all contract requirements by any and all subcontractors.
