

# Development of the Keeler Dunes

Nick Lancaster

Steve Bacon

Desert Research Institute

# Development of Keeler Dunes

- Mapping of landforms and deposits
  - Provide geological context for Keeler Dunes
- Analysis of aerial photographs and satellite images
  - Determine how dunes have changed over time
- Dating of sand deposits
  - Determine age of landforms and deposits

# Geologic Mapping

- Map extent and relationships among Quaternary deposits and landforms
  - Alluvial fans
  - Beach ridges and shorelines
  - Dunes and sand sheets
- Use high-resolution imagery in combination with Lidar topography

# Preliminary Geomorphic Map of Keeler Dunes Area

S. Bacon and N. Lancaster  
Division of Earth and Ecosystem Sciences  
Desert Research Institute

0 0.1 0.2 0.3 0.4 0.5 km

## Shoreline Feature

- Erosional
- Beach ridge

## Geomorphic Map Unit

### Anthropogenic Surfaces

- Af - Artificial fill
- Rd - Highway

### Aeolian Units

- Qss - Active sand sheets
- Qd - Active sand dune
- Qss<sub>c</sub> - Sand sheets with coppice dunes
- Qd<sub>v</sub> - Vegetated sand dunes

### Lacustrine Units (elevation AMSL)

- Qpl - Playa
- Qpl(d) - Disturbed playa surface
- Ql4p - Historic lake plain [<1872 A.D.] (<1096 m)
- Ql3br - Beach ridge [<900-730 cal yr B.P.\*] (~1101 m)
- Ql3p - Historic to Latest Holocene lake plain (1096-1101 m)
- Ql3p(d) - Disturbed Ql3p surface
- Ql2br - Beach ridge [900-730 cal yr B.P.\*] (~1103 m)
- Ql2lp - Latest Holocene lake plain (1101-1103 m)
- Qlt1 - Early Holocene [~8 ka] terrace (~1118 m)

### Alluvial Fan Units

- Qfl - Recent flood deposits
- Qf4 - Active channel
- Qf3 - Historic to Latest Holocene [<900-730 cal yr B.P.]
- Qf2 - Latest to Late Holocene [~0.8 to 3.5 ka]
- Qf1 - Late to early Holocene [~3.5 to 8 ka]

**Note:** Geomorphic map created using 0.5 m LiDAR and 0.1 m aerial photography. Age of shorelines from Bacon et al., 2006 and S. Stine\* (pers. comm.). Age constraints for alluvial fan units from cross-cutting relations with identified shorelines.
